

CLEANING WATER STORAGE TANKS WITH PROXY-CLEAN[®]

IT IS RECOMMENDED THAT WATER STORAGE TANKS BE DRAINED AND CLEANED AT LEAST ONCE PER YEAR.

1. Drain the storage tank as completely as possible.
2. Using a spray nozzle attachment on a garden hose wash out the sediment from the bottom of the tank.
3. In a garden sprayer mix up a 10% solution of Proxy-Clean[®].
4. From the top of the tank spray a generous amount of the 10% solution coating the inside of the tank all the way around the top.
5. Continue to apply the solution to the top of the tank walls until the solution runs down and thoroughly coats the walls of the tank from the top to the bottom.
6. Allow this solution to remain on the walls and bottom of the tank for 1 to 3 hours.
7. Refill the tank with fresh water. There is no need to rinse the Proxy-Clean[®] from the sides of the tank.
